What is Low Vision?

Low vision is a visual impairment that can not be corrected by standard glasses, contact lenses, medication or surgery. You may have low vision if you can't see well enough to do things like:

- Read
- Drive
- Recognize faces
- See the television or computer screen

Low Vision Can be Caused By:

- Age Related Macular Degeneration
- Cataracts
- Glaucoma
- Diabetic Retinopathy
- Injury
- Birth Defects

How Can Occupational Therapy Help?

- Occupational therapy can help you regain your independence
- Training in optical and non-optical aides
- Trial of adaptive devices
- Home safety recommendations
- Mobility training
- Reading and communication
